

Improving Palliative, Aged and  
Chronic Care through Clinical Research  
and Translation (IMPACCT)

PALLIATIVE CARE  
IN PRISONS PROJECT

**Has someone you cared about been in prison while living with a life-limiting disease, such as:**

- **Cancer**
- **Heart Failure**
- **End-stage kidney disease**
- **Emphysema or Chronic Obstructive Pulmonary Disease (COPD)**
- **Another life-limiting disease?**

We want to learn about experiences of people who have had a life-limiting disease in prison in Australia. In particular, we want to hear about family and friends' experiences of having a person close to them in prison who is seriously ill.
